

Mohawk Wood & Laminate floor care

Use a vacuum with a hard floor attachment that does not contain a rotary brush head that could cause scratches.

Wipe away dirt with a clean cotton cloth.

In a clean spray bottle, mix 1 part non-sudsing household ammonia to 3 parts distilled water. Mist the solution onto a clean terry cloth, cotton, or micro-fiber mop (never apply any solution directly to the floor). Launder the terry cloth, cotton or micro-fiber mop head between cleanings. Avoid using detergents that contain fabric softener and do not add fabric softener during the rinse cycle. This will prevent residues from being redeposited on to the floor. This solution will not harm the surface of your Mohawk floor.

If you select to use a product on the market, Avoid using soap or detergent-based cleaners, or a product that contains a wax.

Thank You,
